

## Slim-profile MoreView windows by Yawal

The **MoreView window** was designed for modern projects in which light and views play the leading role.

**Slim-profile window systems** complement the well-known **MoreView sliding systems line**, enabling comprehensive project implementation in a consistent slim-profile aesthetic – both for window and sliding solutions.

### A new dimension of minimalism

**Reduced profile visibility – a slim external profile** only 36 mm wide and a maximum glazing area – makes the boundary between interior and surroundings almost invisible.

## Elegance hidden in every detail

In the new MoreView windows, the **handle** has gained a completely new dimension. It is fully invisible and discreetly concealed within the profile, combining modern design with maximum everyday functionality.

## A cohesive façade

**Drainage concealed within the profile** eliminates the need for front drainage, allowing a uniform and seamless façade surface to be maintained.

The possibility of concealing the frame within the wall and designing glazing with maximum glass area enhances the minimalist façade effect and ensures maximum access to natural light.

## Precision in execution

Well-thought-out structural solutions and modern glass installation technology support efficient prefabrication and precise manufacturing.

**MoreView window** naturally complements Yawal's portfolio, serving as a tool for projects where aesthetic consistency, quality of detail, and control over the final architectural effect are essential.
